Troubleshooting

If the message "No position data" appears on the display of NavNet equipment, there may be a problem with the GPS receiver. Turn off the power and then check the following points:

- Check for objects around the antenna that may interfere with reception.
- Check that the antenna cable is firmly fastened.
- If extension cable(s) are used, check for water leakage at junction point(s).
- Check the antenna cable for damage.
- Check the antenna for damage.
